It has recently come to my attention that we will export the gas we are drilling for in Pennsylvania. This makes no sense to me. I am opposed to fracking because of the environmental issues involved in fracking and now we are not going to use this energy source in the USA. We once again are ravaging the American soil and environment for money alone and not for the good of the American people. I do believe that fracking or some form of abstracting gas from shale can be done safely without harm to the environment or people, but the companies that do the fracking do not want to implement these practices because it would increase the cost to them and now they are going to send this gas to other countries to make more money. Where is the sense is all of this?
