We attach in power point format what we hope you will find to be a highly differentiated proposal which has the quite near term potential of making a major impact on the USA natural gas market supply imbalance.

This proposal suggests a route that has been completely neglected until now; in essence, a FUEL methanol FPSO utilizing differentiated process technology and accessing off shore gas sources of the lowest possible value.

This is not the proper forum for a detailed presentation. This power point attachment touches only the major bullet points. Should you find the proposal to be of incipient interest, we shall be pleased to elaborate the details.

This proposal is not a theoretical concept. On the contrary, project oriented developemnt could commence immediately.

SvT Marshall
